

New in The RFID Shop

January 2016

TSS Gold Reader

TSS is a young up and coming RFID Company based in the Slovak Republic. They were established in 2011 and have been growing ever since.

Their main focus lies with UHF RFID technology and their aim is to make the integration and use of RFID technology easier and more cost effective through the creation of user friendly and affordable devices.

They started their business with two clever, straightforward and very reliable UHF RFID Readers which are a success with our customers: the **DUR120** and **HUR120**.

DUR 120 USB is ideal for USB desktop applications where high performance and advanced functionality are required.

Highlights:

- a **small** (11cmx11cm) easy-to-use UHF RFID desktop reader powered and controlled directly by a **USB interface**
- integrated antenna** for short- to medium- range applications
- ergonomic** shape
- flexible** mounting options

More importantly: **DUR 120** is the European UHF RFID reader with currently **the best price on the market**, including a two-year warranty!

The HUR 120 is a **portable** UHF RFID reader, presenting the same advantages as the DUR 120.

More recently TSS have added to their portfolio the **Gold Reader**, a 4-port UHF RFID reader, which is already drawing a lot of interest with sales steadily rising.

Highlights:

- a simple **fixed low profile reader**
- users can start reading tags and developing solutions **immediately**
- communicates **via Low Level Reader Protocol**
- LLRP ToolKit allows **easy development** of custom interfaces and software solutions

POE capability allows power to be delivered over properly-equipped local area networks, eliminating expensive AC wiring installation.
