

# New in The RFID Shop

March 2016

## **HID range extended**

The RFID Shop now offers **HID Brick Tags** [698930, 698932, 698934]

HID Brick Tags are tiny, highly resilient tags.

They are perfect for RFID applications that require discreet placement of small, featherweight tags delivering reliable performance.

Brick Tag Ceramic units are optimized for placement on metal assets, such as tools, weaponry and surgical instrumentation. The hard shells encasing these tiny UHF transponders shield them from exposure to autoclave sterilization and demanding industrial environments.

### **Please remember:**

The RFID Shop offers tags at **conveniently low order quantities** for smaller projects or for initial test applications. Large order quantities attract price reductions. Any questions? Contact us: [sales@rfip.eu](mailto:sales@rfip.eu)

## **Our TSS range has grown**

TSS have extended their range with two nifty evaluation kits:

**The mURM UHF RFID Evaluation Kit** and the **mURM UHF RFID Outdoor Evaluation Kit**. Both kits contain the highly flexible TSS mURM evaluation board. This board is an easily integrated, very reliable small board with low power consumption. It gives our customers the perfect, user-friendly start for developing customized RFID solutions.

## New LF reader modules by iDT

Following the success of the iDT UHF reader modules, iDTRONIC have extended their range to include LF modules with the same tiny form factor.

**The LF M800, LF R820 and LF R830** are fast, efficient and secure RFID Modules for the use and integration of RFID technology into our customers' OEM applications. They are designed to support tag standards EM 4200, EM 4550 as well as NXP Hitag 1, Hitag 2 and Hitag S.

These compact single boards come with complete SDK and Windows based testing software.

## Back by popular demand: Tagsys Ario Tags

Tagsys have decided to reissue their highly successful Ario Tag range with newly available technology and the RFID Shop will be offering the new tags as soon as they are available.

Tagsys Ario Tags are rugged, highly resistant and very small HF tags. They are specifically designed for industrial applications that require RFID tags that can withstand harsh environmental conditions. They are robust enough to be embedded, encapsulated, injected into, or affixed directly onto products that are subjected to extreme processes.
